PROFESSIONAL SUMMARY

Full-Stack Developer with 1.5+ years of experience, passionate about solving real business problems with software. Built and maintained web systems for logistics, GPS tracking, and ERP companies — including factory inventory management and real-time fleet tracking for transport businesses. Designed database structures and built REST APIs using Go, PHP Laravel, and ReactJS. Improved system speed and fixed critical bugs across several live projects, with a strong focus on secure coding (OAuth 2.0, access control). Now looking for a new Full-Stack or Backend Developer role to keep growing and take on bigger challenges.

SKILLS

Technical

Languages: Go, PHP, JavaScript (ES6+), SQL
Frontend: React, React Hook Form, TanStack Query, DaisyUI, shadcn/ui
Backend: Go (Gorilla/Mux), PHP Laravel
Databases: MySQL, MongoDB
APIs & Maps: Google Maps API, Longdo Maps API
Tools: Bitbucket, Git, Docker

Soft Skills

- Communication
- Collaboration & Teamwork
- Ownership & Responsibility
- Problem Identification & Troubleshooting
- Adaptability & Fast Learning
- Time Management

EDUCATION

King Mongkut's University of Technology North Bangkok (KMUTNB)

2019 – 2023

B.Eng. in Electrical and Electronic Engineering Technology | GPA: 3.03
TOEIC Score: 630 (Listening 405 / Reading 225) — Tested 25 Jun 2026

PROFESSIONAL EXPERIENCE

Full-Stack Developer • FreewillFX Co., Ltd.

Oct 2024 – Present (1 yr 6 mo)

iSupply — Concrete Delivery Dashboard & Inventory Management System

- Owned full-stack development (Frontend + Backend) of a multi-tenant inventory system for concrete plants
- Reduced API response time by ~30% by fixing slow queries and adding indexes (EXPLAIN-based tuning)
- Fixed a memory-crash bug in bulk Excel exports by processing stock reports in smaller batches
- Connected a Go authentication service to the PHP application using OAuth 2.0

Tech Stack: ReactJS, PHP Laravel, MySQL, MongoDB

Mena Transport — Real-Time GPS Interface

- Built a Go program to process real-time GPS data from about 50 delivery vehicles
- Checked and reformatted GPS data to match a third-party logistics system's requirements

Tech Stack: Go (Gorilla/Mux), RabbitMQ

ICHO Automate Plant — Web Application (Data Management)

- Led the full migration of a legacy PHP 5.5 codebase to PHP 8.3, including DEV/QAS/Production setup
- Built an MVC-based CRUD system for vehicle and driver data, with Excel import/export for factory operations
- Managed Git workflow to release code from dev to production after QA testing
- Fixed security issues found in a VA scan, including access-token authentication and session handling
- Updated frontend libraries (Bootstrap 5.3, jQuery) with no change to existing UI behavior

Tech Stack: PHP 8.3, MySQL, Bootstrap 5.3, jQuery

ICHO Automate Plant — Panel-PC Terminal Application

- Built an on-site terminal app connecting to hardware (breathalyzer, gate, license-plate camera) for factory entry control
- Read and validated vehicle data in real time via database polling before displaying results on-site

Tech Stack: PHP 8.3, MySQL

Cloudtime Passenger — Passenger Bus GIS Dashboard

- Built a map dashboard showing bus routes and real-time boarding counts for a passenger bus fleet
- Fixed a data-mismatch issue between GPS timestamps and trip schedules for accurate reporting
- Built the UI in React from Figma designs, and reduced unnecessary Google Maps API calls

Tech Stack: Go (Gorilla/Mux), ReactJS, MySQL, Google Maps API

Frontend Developer (Contract, Part-time) • Payment Platform

Apr 2025 – Jul 2025 (3.5 mo)

- Built pages, forms, and navigation (React Hook Form + TanStack Query) for an internal support ticketing system
- Used existing components to match the team's design system (DaisyUI + shadcn/ui)

Tech Stack: ReactJS, React Hook Form, TanStack Query, DaisyUI, shadcn/ui
